## Technical Information

# Prosonic M FMU40/41/42/43/44

## Ultrasonic Level Measurement

Compact transmitters for non-contact level measurement of fluids, pastes and coarse bulk materials

FMU40

FMU41

FMU42

FMU43

FMU44

### Application

- Continuous, non-contact level measurement in fluids, pastes, sullages and coarse bulk materials
- Flow measurement in open channels and measuring weirs
- System integration via:
  - HART® (standard), 4 to 20mA
  - PROFIBUS® PA
  - FOUNDATION™ Fieldbus
- Maximum measuring range:
  - FMU 40: 16 ft (5 m) in fluids / 6 ft (2 m) in bulk materials
  - FMU 41: 26 ft (8 m) in fluids / 12 ft (3.5 m) in bulk materials
  - FMU 42: 33 ft (10 m) in fluids / 16 ft (5 m) in bulk materials
  - FMU 43: 50 ft (15 m) in fluids / 23 ft (7 m) in bulk materials
  - FMU44: 65 ft (20 m) in fluids / 33 ft (10 m) in bulk materials

### Features and benefits

- Quick and simple commissioning via menu-guided local operation with four-line plain text display
- Envelope curves on the local display for simple diagnosis
- Easy remote operation, diagnosis and measuring point documentation with the supplied FieldCare operating program.
- Suitable for explosion hazardous areas (Gas-Ex, Dust-Ex)
- Linearization function (up to 32 points) for conversion of the measured value into any unit of length, volume or flow rate
- Non-contact measurement method minimizes service requirements
- Optional remote display and operation (up to 65 ft / 20 m) from transmitter)
- Installation possible from thread G 1½", 1½" NPT, 2" NPT or universal slip-on flange
- Integrated temperature sensor for automatic correction of the temperature dependent sound velocity

## Function and system design

### Measuring principle

**E:** Empty distance; **F:** Span (full distance); **D:** Distance from sensor membrane - product surface; **L:** Level; **BD:** Blocking distance

| Sensor | BD             | Max. range fluids | Max. range bulk materials |
|--------|----------------|-------------------|---------------------------|
| FMU40  | 9.8" (0.25 m)  | 16 ft (5 m)       | 6.5 ft (2 m)              |
| FMU41  | 13.8" (0.35 m) | 26 ft (8 m)       | 11.5 ft (3.5 m)           |
| FMU42  | 15.7" (0.4 m)  | 33 ft (10 m)      | 16 ft (5 m)               |
| FMU43  | 23.6" (0.6 m)  | 50 ft (15 m)      | 23 ft (7 m)               |
| FMU44  | 19.7" (0.5 m)  | 65 ft (20 m)      | 33 ft (10 m)              |

### Time-of-flight method

The sensor of the Prosonic M transmits ultrasonic pulses in the direction of the product surface. The pulses are reflected back and received by the sensor. The Prosonic M measures the time  $t$  between pulse transmission and reception. The instrument uses the time  $t$  (and the velocity of sound  $c$ ) to calculate the distance  $D$  between the sensor membrane and the product surface:

$$D = c \cdot t / 2$$

As the device knows the empty distance  $E$  from a user entry, it can calculate the level as follows:

$$L = E - D$$

An integrated temperature sensor compensates for changes in the velocity of sound caused by temperature changes.

### Interference echo suppression

The interference echo suppression feature on the Prosonic M ensures that interference echos (e.g. from edges, welded joints and installations) are not interpreted as a level echo.

### Calibration

Enter the empty distance  $E$  and the span  $F$  to calibrate the device.

### Blocking distance

Span  $F$  may not extend into the blocking distance  $BD$ . Level echos from the blocking distance cannot be evaluated due to the transient characteristics of the sensor.

## Equipment architecture

## 4 to 20 mA output with HART protocol

The complete measuring system consists of:

If the HART communication resistor is not built into the supply unit, it is necessary to insert a communication resistor of 250  $\Omega$  into the 2-wire line.

## Local operation

- with display and operating module VU 331
- with a Personal Computer, FXA 193 and the operating software FieldCare

## Remote operation

- with HART handheld terminal DXR 375
- with a Personal Computer, Commubox FXA 191 and the operating software COMMUWIN II respectively FieldCare.

### System integration using PROFIBUS PA

A maximum of 32 transmitters (8 if mounted in an explosion hazardous location EEx ia IIC according to FISCO-model) can be connected to the bus. The segment coupler provides the operating voltage to the bus. Both on-site as well as remote operation are possible.

### System integration using Foundation Fieldbus (FF)

A maximum of 32 transmitters (standard or EEx d) can be connected to the bus. For protection class EEx ia: the maximum number of transmitters depends on the established rules and standards for intrinsically safe circuits (EN 60070-14) and proof of intrinsic safety. Both local and remote operation are possible.

### System integration using Endress+Hauser Rackbus

You can interconnect a maximum of 64 2-wire devices with HART protocol to a Rackbus. Use an FXN 672 interface module for each device. You can integrate this bus into a higher-level bus by using a ZA gateway. Gateways are available for MODBUS, FIP, PROFIBUS, INTERBUS etc. Both on-site and remote operation are possible.

Hinweis!

The FXN672 can be used with all 2-wire devices of the Prosonic M family.

## System integration via Fieldgate

### Vendor Managed Inventory

By using Fieldgate to interrogate tank or silo levels remotely, suppliers of raw materials can provide their regular customers with information about the current supplies at any time and, for example, account for them in their own production planning. For their part, the Fieldgate monitors the configured level limits and, if required, automatically activates the next supply. The spectrum of options here ranges from a simple purchasing requisition via e-mail through to fully automatic order administration by coupling XML data into the planning systems on both sides.

### Remote maintenance of measuring equipment

Fieldgates not only transfer the current measured values, they also alert the responsible standby personnel, if required, via e-mail or SMS. In the event of an alarm or also when performing routine checks, service technicians can diagnose and configure connected HART devices remotely. All that is required for this is the corresponding HART operating software (e.g. FieldCare, ...) for the connected device. Fieldgate passes on the information transparently, so that all options for the respective operating software are available remotely. Some local service operations can be avoided by using remote diagnosis and remote configuration and all others can at least be better planned and prepared.

#### Note!

The number of instruments which can be connected in multidrop mode can be calculated by the "FieldNetCalc" program. A description of this program can be found in Technical Information TI 400F (Multidrop Connector FXN520). The program is available from your Endress+Hauser sales organization or in the internet at: **"www.endress.com Download"** (Text Search = "Fieldnetcalc").

## Input

### Measured variable

The distance D between the sensor membrane and the product surface is measured.

Using the linearisation function, the device uses D to calculate:

- level L in any units
- volume V in any units
- flow Q across measuring weirs or open channels in any units

### Measuring range

The measuring range is limited by the range of a sensor. The sensor range is, in turn, dependent on the operating conditions. To estimate the actual range, proceed as follows (see also the calculation example in the diagram):

1. Determine which of the influences shown in the following table are appropriate for your process.
2. Add the corresponding attenuation values.
3. From the total attenuation, use the diagram to calculate the range.

| Fluid surface                     | Attenuation        |
|-----------------------------------|--------------------|
| Calm                              | 0 dB               |
| Waves                             | 5 to 10 dB         |
| Strong turbulence (e.g. stirrers) | 10 to 20 dB        |
| Foaming                           | Ask Endress+Hauser |

| Bulk material surface                  | Attenuation |
|----------------------------------------|-------------|
| Hard, rough (e.g. rubble)              | 40 dB       |
| Soft (e.g. peat, dust-covered clinker) | 40 to 60 dB |

| Dust                  | Attenuation |
|-----------------------|-------------|
| No dust formation     | 0 dB        |
| Little dust formation | 5 dB        |
| Heavy dust formation  | 5 to 20 dB  |

| Filling curtain in detection range | Attenuation |
|------------------------------------|-------------|
| None                               | 0 dB        |
| Small quantities                   | 5 to 10 dB  |
| Large quantities                   | 10 to 40 dB |

| Temperature difference between sensor and product surface | Attenuation |
|-----------------------------------------------------------|-------------|
| to 68°F (20°C)                                            | 0 dB        |
| to 104°F (40°C)                                           | 5 to 10 dB  |
| to 176°F (80°C)                                           | 10 to 20 dB |

L00-FMU4xxxx-05-00-00-en-002

**Example (for FMU 43)**

For typical solid applications, a certain amount of dust coverage is normally present. Therefore, the following range results from the table and the diagram

|                                         |               |                              |
|-----------------------------------------|---------------|------------------------------|
| ■ Dust-covered rubble                   | approx. 50 dB |                              |
| ■ no dust formation                     | 0 dB          |                              |
| ■ No filling curtain in detection range | 0 dB          |                              |
| ■ Temperature diff. < 68°F (20°C)       | 0 dB          |                              |
|                                         | approx. 50 dB | => range approx. 23 ft (7 m) |

These measuring conditions have been taken into account during the calculation of the maximum measuring range in solid applications.

**Operating frequency**

| Sensor | Operating frequency |
|--------|---------------------|
| FMU40  | approx. 70 kHz      |
| FMU41  | approx. 50 kHz      |
| FMU42  | approx. 42 kHz      |
| FMU43  | approx. 35 kHz      |
| FMU44  | approx. 30 kHz      |

## Output

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Linearization</b>   | <p>The linearization function of the Prosonic M allows conversion of the measured value into any unit of length or volume. In open channels or measuring weirs, also a flow linearization is possible (calculation of the flow from the measured level). The linearization table for calculating the volume in an horizontal cylindrical tank is preprogrammed. You can also enter any number of other tables containing up to 32 value pairs either manually or semi-automatically (by filling the vessel under controlled conditions).</p> <p>The supplied FieldCare operating program can automatically calculate the table for any tank, weir or flume and upload it into the device.</p> <p>Flow curves for open channels can be calculated and entered into the instrument by FieldCare as well.</p> |

## Auxiliary energy

|                             |                                                                                                                                                                |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Terminal compartment</b> | In the F12 housing, the terminals are located underneath the housing cover. In the T12 housing, they are under the cover of the separate terminal compartment. |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|

L00-FMR2xxxx-04-00-00-en-001

## Terminal assignment

## 4 to 20 mA with HART, 2-wire

## 4 to 20 mA active with HART, 4-wire

- Connect the connecting line to the screw terminals (line cross-sections of 20 to 14 AWG / 0.5 to 2.5 mm) in the terminal compartment.
- Use 2-wire twisted pair cable with shield for the connection.
- Protective circuitry against reverse polarity, RFI and over-voltage peaks is built into the device (see also Technical Information TI 241F/00/en "EMC Test Procedures")

## PROFIBUS PA

## FOUNDATION Fieldbus

The digital communication signal is transmitted to the bus via a 2-wire connection. The bus also provides the auxiliary energy. Use 2-wire twisted pair cable with shield.

Refer to the following operating manuals for information on cable types, and how to set up and ground the network:

- BA 198F/00/de „PROFIBIS -DP/-PA, Guidelines for planning and commissioning“
- BA 013S/04/en „Foundation Fieldbus, Installation and Commissioning Guidelines“

## Fieldbus plug connectors

For the versions with fieldbus plug connector (M12 or 7/8"), the signal line can be connected without opening the housing.

**Pin assignment of the M12 plug connector (PROFIBUS PA plug)**

|                                                                                                                                  |     |               |

1) Start-up current 11 mA

**HART, 4-wire, active**

| Version     | Voltage      | max. load |
|-------------|--------------|-----------|
| DC          | 10.5 to 32 V | 600 Ω     |
| AC 50/60 Hz | 90 to 253 V  | 600 Ω     |

**Terminals**

Cable cross-section: 0.5 to 2.5 mm (20 to 14 AWG)

**Cable entry**

- Cable gland: M20x1.5 (recommended cable diameter 6 to 10 mm)
- Cable entry G ½ or ¾" NPT
- PROFIBUS-PA M12 plug
- Fieldbus Foundation 7/8" plug

**Power consumption**

| Version              | Power consumption |
|----------------------|-------------------|
| 2-wire               | 51 mW to 800 mW   |
| 4-wire AC            | max. 4VA          |
| 4-wire DC; FMU 40/41 | 330 mW to 830 mW  |
| 4-wire DC; FMU 42/43 | 600 mW to 1 W     |

**Current consumption  
(2-wire-instruments)**

| Communication       | Current consumption |
|---------------------|---------------------|
| HART                | 3.6 to 22 mA        |
| PROFIBUS PA         | max. 13 mA          |
| Foundation Fieldbus | max. 15 mA          |

**HART ripple**

47 to 125 Hz: V<sub>pp</sub> = 200 mV (measured at 500 Ω)

**Max. noise HART**

500 Hz to 10 kHz: V<sub>rms</sub> = 2.2 mV (measured at 500 Ω)

**Galvanic isolation**

With 4-wire devices, the evaluation electronics and power voltage are galvanically isolated from each other.

## Performance characteristics

**Reaction time**

The reaction time depends on the parameter settings. The minimum values are:

- 2-wire devices (FMU40/41/42): min. 2 s
- 2-wire devices (FMU43 - PROFIBUS PA or FOUNDATION Fieldbus): min. 2 s
- 2-wire devices (FMU44): min. 3 s
- 4-wire devices (FMU40/41/42/43/44): 0.5 s

**Reference operating  
conditions**

- Temperature = +68°F (20°C)
- Pressure = 14.7 psia (1013 mbar abs.)
- Humidity = 50 %
- Ideal reflective surface (e.g. calm, smooth fluid surface)
- No interference reflections within signal beam
- Set application parameters:
  - Tank shape = flat ceiling
  - Medium property = liquid
  - process conditions = calm surface

**Measured value resolution**

| Sensor | Measured value resolution |
|--------|---------------------------|
| FMU40  | 0.04" (1 mm)              |
| FMU41  | 0.04" (1 mm)              |
| FMU42  | 0.08" (2 mm)              |
| FMU43  | 0.08" (2 mm)              |
| FMU44  | 0.08" (2 mm)              |

**Pulse frequency**

- 2-wire devices (FMU40/41/42): max. 0.5 Hz
- 2-wire devices (FMU43 – PROFIBUS PA or FOUNDATION Fieldbus): max. 0.5 Hz
- 2-wire devices (FMU44): max. 0.3 Hz
- 4-wire devices (FMU40/41/42/43/44): max. 2 Hz

The exact values are dependent on the type of device and the parameter settings.

**Measuring error**

Typical specifications for reference operating conditions (include linearity, repeatability, and hysteresis):

| Sensor | Measuring error                                                                       |
|--------|---------------------------------------------------------------------------------------|
| FMU40  | $\pm 0.08"$ (2 mm) or 0.2% of set measuring distance (empty calibration) <sup>1</sup> |
| FMU41  | $\pm 0.08"$ (2 mm) or 0.2% of set measuring distance (empty calibration) <sup>1</sup> |
| FMU42  | $\pm 0.16"$ (4 mm) or 0.2% of set measuring distance (empty calibration) <sup>1</sup> |
| FMU43  | $\pm 0.16"$ (4 mm) or 0.2% of set measuring distance (empty calibration) <sup>1</sup> |
| FMU44  | $\pm 0.16"$ (4 mm) or 0.2% of set measuring distance (empty calibration) <sup>1</sup> |

<sup>1</sup>whichever is greater

**Influence of the vapor pressure**

The vapor pressure at 20°C (68°F) gives a hint on the accuracy of the ultrasonic level measurement. If the vapor pressure at 20°C (68°F) is below 50 mbar (0.7 psi), ultrasonic level measurement is possible with very high accuracy. This is valid for water, aqueous solutions, water-solid-solutions, dilute acids (hydrochloric acid, sulfuric acid, ...), dilute bases (caustic soda, ...), oils, greases, slurries, pastes, ... High vapor pressures or outgassing media (ethanol, acetone, ammonia, ...) can influence the accuracy. If conditions like these are present, please contact the Endress+Hauser support.

**Installation conditions****Installation variants FMU 40, FMU 41**

For installation bracket or adapter flange s. chapter "Accessories".

### Installation variants FMU42, FMU44

### Installation variants FMU 43

### Installation conditions for level measurements

- Do not install the sensor in the middle of the tank (3). We recommend leaving a distance between the sensor and the tank wall (1) measuring 1/6 of the tank diameter.
- Use a protective cover, in order to protect the device from direct sun or rain (2).
- Avoid measurements through the filling curtain (4).

- Make sure that equipment (5) such as limit switches, temperature sensors, etc. are not located within the emitting angle  $\alpha$ . In particular, symmetrical equipment (6) such as heating coils, baffles etc. can influence measurement.
- Align the sensor so that it is vertical to the product surface (7).
- Never install two ultrasonic measuring devices in a tank, as the two signals may affect each other.
- To estimate the detection range, use the 3 dB emitting angle  $\alpha$ .

| Sensor | $\alpha$ | $L_{\max}$   | $r_{\max}$     |
|--------|----------|--------------|----------------|
| FMU40  | 11°      | 16 ft (5 m)  | 18.9" (0.48 m) |
| FMU41  | 11°      | 26 ft (8 m)  | 30.3" (0.77 m) |
| FMU42  | 9°       | 33 ft (10 m) | 31.1" (0.79 m) |
| FMU43  | 6°       | 50 ft (15 m) | 31.1" (0.79 m) |
| FMU44  | 11°      | 65 ft (20 m) | 76" (1.93 m)   |

### Installation in narrow shafts

In narrow shafts with strong interference echoes, we recommend using an ultrasound guide pipe (e.g. PE or PVC wastewater pipe) with a minimum diameter of 4" (100 mm).

Make sure that the pipe is not soiled by accumulated dirt. If necessary, clean the pipe at regular intervals.

100-FMU4xxxx-17-00-00-en-010

### Installation conditions for flow measurements

- Install the Prosonic M at the inflow side, as close above the maximum water level  $H_{\max}$  as possible (take into account the blocking distance BD).
- Position the Prosonic M in the middle of the channel or weir.
- Align the sensor membrane parallel to the water surface.
- Keep to the installation distance of the channel or weir.
- You can enter the "Flow to Level" linearisation curve ("Q/h curve") using FieldCare or manually via the local display.

### Example: Khafagi-Venturi flume

100-FMU4xxxx-17-00-00-en-003

### Example: Triangular weir

100-FMU4xxxx-17-00-00-en-012

### Blocking distance, nozzle installation

Install the Prosonic M at a height so that the blocking distance BD is not undershot, even at maximum fill level. Use a pipe nozzle if you cannot maintain the blocking distance in any other way. The interior of the nozzle must be smooth and may not contain any edges or welded joints. In particular, there should be no burr on the inside of the tank side nozzle end. Note the specified limits for nozzle diameter and length. To minimize disturbing factors, we recommend an angled nozzle edge (ideally 45°).

**BD:** blocking distance; **SD:** safety distance; **E:** empty calibration; **F:** full calibration (span); **D:** nozzle diameter; **L:** nozzle length

| Nozzle diameter         | Maximum nozzle length |                 |                |                |                |

| Max. range in liquids   | 16 ft (5 m)           | 26 ft (8 m)     | 33 ft (10 m)   | 50 ft (15 m)   | 65 ft (20 m)   |
| Max. range in solids    | 6.5 ft (2 m)          | 11.5 ft (3.5 m) | 16 ft (5 m)    | 23 ft (7 m)    | 33 ft (10 m)   |

#### Caution!

If the blocking distance is undershot, it may cause device malfunction.

#### Note!

In order to notice if the level approaches the blocking distance, you can specify a safety distance (SD). If the level is within this safety distance, the Prosonic M outputs a warning or alarm message.

## Ambient conditions

|                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| FMU40  | approx. 5.5 lb (2.5 kg) |
| FMU41  | approx. 6 lb (2.6 kg)   |
| FMU42  | approx. 6.6 lb (3 kg)   |
| FMU43  | approx. 8 lb (3.5 kg)   |
| FMU44  | approx. 9 lb (4 kg)     |

**Housing design****Types of housings**

- F12 housing with sealed terminal compartment for standard or EEx ia (intrinsically safe) applications
- T12 housing with separate terminal compartment and explosion proof encapsulation

**Material**

Aluminum, seawater resistant, powder-coated

**Cover**

- Aluminum, for version without local display
- Inspection glass for version with local display. This version cannot be supplied together with the ATEX II 1/2 D certificate.

**Process connection,  
sealing material,  
sensor material**

| Sensor | Process connection                                                                                                                                                                                                                                                                                                      | Material in contact with process                                                                    |

- 1) Endress+Hauser supplies DIN/EN flanges made of stainless steel AISI 316L with the material number 1.4435 or 1.4404. With regard to their temperature stability properties, the materials 1.4435 and 1.4404 are grouped under 13E0 in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.

## Human interface

### Display and operating elements

The LCD module VU 331 for display and operation is located beneath the housing cover. The measured value is legible through the glass in the cover. Open the cover to operate the device.

An unlock parameter must be entered to do so. |

## Local operation

### Operation with VU 331

The LC-Display VU 331 allows configuration via 3 keys directly at the instrument. All device functions can be set through a menu system. The menu consists of function groups and functions. Within a function, application parameters can be read or adjusted. The user is guided through a complete configuration procedure.

L00-FM14xxxx-07-00-00-en-004

### Operation with the handheld terminal DXR 375

On devices with HART communication, you can also access the menu using the handheld terminal DXR 375.

L00-FM14xxxx-07-00-00-de-005

**Remote operation****Operation with FieldCare**

FieldCare is Endress+Hauser's FDT based Plant Asset Management Tool. It can configure all intelligent field devices in your plant and supports you in managing them. By using status information, it also provides a simple but effective means of checking their health.

- Supports Ethernet, HART, PROFIBUS, FOUNDATION Fieldbus etc.
- Operates all Endress+Hauser devices
- Operates all third-party actuators, I/O systems and sensors supporting the FDT standard
- Ensures full functionality for all devices with DTMs
- Offers generic profile operation for any third-party fieldbus device that does not have a vendor DTM

**Operation with Commuwin II (for communication variants HART or PROFIBUS-PA)**

Commuwin II is an operating software with graphical support (MS Windows) for intelligent transmitters with the communication protocols Rackbus, Rackbus RS-485, HART and PROFIBUS-PA.

Commuwin II supports the following functions:

- Online configuration of transmitters
- Loading and saving of instrument data (Upload/Download)
- Orderly visualisation of measured values and limit values
- Display and recording of measured values with a line recorder

It is not possible to display envelope curves with Commuwin II. To display them, please use the ToF Tool program supplied.

Connections:

- HART with Commubox FXA 191 (available as accessory)
- PROFIBUS PA

**Operation with NI-FBUS Configurator (only Foundation Fieldbus)**

The NI-FBUS Configurator is an easy-to-use graphical environment for creating linkages, loops, and a schedule based on the fieldbus concepts.

You can use the NI-FBUS Configurator to configure a fieldbus network as follows:

- Set block and device tags
- Set device addresses
- Create and edit function block control strategies (function block applications)
- Configure vendor-defined function and transducer blocks
- Create and edit schedules
- Read and write to function block control strategies (function block applications)
- Invoke Device Description (DD) methods
- Display DD menus
- Download a configuration
- Verify a configuration and compare it to a saved configuration
- Monitor a downloaded configuration
- Replace devices
- Save and print a configuration

## Certificates and Approvals

**CE mark**

The measuring system meets the legal requirements of the EC-guidelines. Endress+Hauser confirms the instrument passing the required tests by attaching the CE-mark.

**Ex approval**

The available certificates are listed in the ordering information. Note the associated safety instructions (XA) and control or installation drawings (ZD).

**External standards and guidelines****EN 60529**

Protection class of housing (IP-code)

**EN 61326**

Electromagnetic compatibility (EMC requirements)

**NAMUR**

Standards committee for measurement and control in the chemical industry

**Scope of delivery**

- Instrument according to the version ordered
  - FieldCare software
  - Operating manual according to the communication version
  - for certified instrument versions: Safety Instructions, Control- or Installation drawings
  - for FMU 40 \*R\*\*\*\* and FMU 41 \*R\*\*\*\*: counter nut (PC)
  - for FMU 40/41: sealing ring (EPDM)
  - for gland M20x1.5:
    - 1 cable gland for 2-wire instruments
    - 2 cable glands for 4-wire instruments
- The cable glands are mounted on delivery.

## Accessories

### Weather protection cover

A Weather protection cover made of stainless steel is recommended for outdoor mounting (order code: 543199-0001). The shipment includes the protective cover and tension clamp.

100-FMR2xxxx-00-00-06-en-001

### Installation bracket for FMU 40/41

100-FMU4x-00-00-00-de-001

- for FMU 40, G1½: Order No. 942669-0000
- for FMU 41, G2: Order No. 942669-0001

suited for NPT 1½" and 2" as well

- The 1.97" (50 mm) or 2.44" (62 mm) orifices serve for the mounting of the FMU 40 or FMU 41 sensor, respectively.
- The 0.87" (22 mm) orifice may be used for an additional sensor.

## Mounting Frame

L00-FMU4x-00-00-yy-005

| Height        | Material          | Order Code  |
|---------------|-------------------|-------------|
| 28" (700 mm)  | galv. steel       | 919791-0000 |
| 28" (700 mm)  | 1.4301 (AISI 304) | 919791-0001 |
| 55" (1400 mm) | galv. steel       | 919791-0002 |
| 55" (1400 mm) | 1.4301 (AISI 304) | 919791-0003 |

## Wall Bracket

| Material     | Order Code  |
|--------------|-------------|
| galv. steel  | 919792-0000 |
| 316Ti/1.4571 | 919792-0001 |

## Commubox FXA191 HART

For intrinsically safe communication with FieldCare via the RS232C interface. For details refer to TI237F/00/en.

## Commubox FXA195 HART

For intrinsically safe communication with FieldCare via the USB interface. For details refer to TI404F/00/en.

**Service Interface FXA193**

The Service-Interface connects the Service plug of Proline and ToF instruments with the 9 pin RS 232C interface of a PC. (USB connectors must be equipped with a usual commercial USB/Serial adapter.)

**Product structure**

**Associated documentation**

- Technical Information: TI063D
- Safety Instructions for ATEX II (1) GD: XA077D
- Supplementary information for the cable adapters: SD092D

**Commubox FXA291**

The Commubox FXA291 connects Endress+Hauser field instruments with CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or a notebook. For details refer to TI405C/07/en.

Note!

For the following Endress+Hauser instruments you need the "ToF Adapter FXA291" as an additional accessory:

- Cerabar S PMC71, PMP7x
- Deltabar S PMD7x, FMD7x
- Deltapilot S FMB70
- Gammapilot M FMG60
- Levelflex M FMP4x
- Micropilot FMR130/FMR131
- Micropilot M FMR2xx
- Micropilot S FMR53x, FMR540
- Prosonic FMU860/861/862
- Prosonic M FMU4x
- Tank Side Monitor NRF590 (with additional adapter cable)
- Prosonic S FMU9x

**ToF Adapter FXA291**

The ToF Adapter FXA291 connects the Commubox FXA291 via the USB interface of a personal computer or a notebook to the following Endress+Hauser instruments:

- Cerabar S PMC71, PMP7x
- Deltabar S PMD7x, FMD7x
- Deltapilot S FMB70
- Gammapilot M FMG60
- Levelflex M FMP4x
- Micropilot FMR130/FMR131
- Micropilot M FMR2xx
- Micropilot S FMR53x, FMR540
- Prosonic FMU860/861/862
- Prosonic M FMU4x
- Tank Side Monitor NRF590 (with additional adapter cable)
- Prosonic S FMU9x

For details refer to KA271F/00/a2.

## Remote display FHX40

| B                  | Mounting bracket, pipe 1" / 2"                |  |                              |
| FHX40 -            |                                               |  | Complete product designation |

For connection of the remote display FHX40 use the cable which fits the communication version of the respective instrument.

## Supplementary documentation

### System Information

SI 005F

Ultrasonic level measurement

### Operating manual

Depending on the communication variant ordered, the following operating manuals are supplied with the device:

| Communication       | Operating manual |
|---------------------|------------------|
| 4 to 20mA, HART     | BA 237F          |
| Profibus PA         | BA 238F          |
| Foundation Fieldbus | BA 239F          |

These instructions describe the installation and first commissioning of the Prosonic M. From the operating menu, all functions are included, which are required for standard measurement tasks. Additional functions are **not** contained in the manual.

### Description of device functions

BA 240F

This contains a detailed description of **all** the functions of the Prosonic M and is valid for all communication variants.

A pdf file of this document can be found

- in the supplied "ToF Tool - FieldTool Package" at "Help/ToF Tool Help/ Online Manual/ Operating Manual/Ultrasonic/Prosonic M FMU4x Functions"<sup>1)</sup>.
- in the internet at "www.endress.com". Click "Download" and enter the product code "FMU4\*" into the search form.

### Short instructions

KA 183F

Can be found under the device housing cover.

The most important menu functions are summarised on this sheet. It is intended primarily as a memory jogger for users who are familiar with the operating concept of Endress+Hauser time-of-flight instruments.

### Safety Instructions ATEX

The following safety instructions are supplied with ATEX-certified device versions. If the devices are used in explosive areas, comply with all the specifications in these safety instructions.

| Instrument version                                                                                                                                                | Certificate                               | Communication                                                                                  | Housing                         | Safety Instructions |

**Safety Instructions NEPSI**

The following safety instructions are supplied with NEPSI-certified device versions. If the devices are used in explosive areas, comply with all the specifications in these safety instructions.

| Instrument version                                                                                                       | Certificate                                        | Communication                                                                                                           | Housing                                                                | Safety Instructions |
